Property Description

This property is not just a home but a lifestyle choice as the jungle (with a ravine and stream) is only 10 meters (30 ft away). This is a "pathway" for the howler monkeys that can be seen and heard at different times of the day. Also, toucans and parrots are spotted here very frequently along with many other different types of birds and butterflies (especially the famous blue 'morphos' which follow the stream beside the villa). The mountains (going straight up) are approx 200 meters behind the villa. The villa is situated at 900+ ft above sea level with 2 ocean views (one view is of the famous Isla Del Caño which can be seen from the entire property and villa and the other is, seeing the point at Drake's Bay which is close to Panama). Located in the upper Ojochal area and in a secure gated community setting (yet very private), the main villa itself is a very spacious 1450 sq ft in size with total living area of 2000 + sq ft.
